

1.33 Arithmetic average 0 из 1 шага пройдено 0 из 1 балла получено

Arithmetic average

Write a program that reads two numbers a and b from the keyboard, calculates and outputs to the console the arithmetic average of all numbers from the interval $[a; b]$, which are divided by 3.

In the example below the arithmetic average is calculated for the numbers on the interval $[-5; 12]$. Total numbers divided by 3 on this interval 6: $-3, 0, 3, 6, 9, 12$. Their arithmetic average equals to 4.5

The program input contains intervals, which always contain at least one number, which is divided by 3.

Sample Input:

-5

12

Sample Output:

4.5
