1.23 Direction   1 из 1 шага пройден   1 из 1 балла получен

Write a program, which reads the number of direction (1 − up, 2 − down, 3 − left, 4 − right, 0 − stay) and outputs the text «**move up**» (or «move down», or «move left», or «move right», or «do not move» depending on the entered number). If it is a number that does not belong to any of the listed directions, the program should output: «**error!**»

Note: the output text should **exactly** match the sample! Including letters case and location of spaces.

Sample Input:

```
1
```

Sample Output:

```
move up
```
